AI ENGINEER @ ISD

Hryhorii Manaienkov

AI Engineer · ex-Team Lead · Java/Angular, .NET

manaenkov.gregory@gmail.com · hman.pro · linkedin.com/in/hryhorii-manaienkov-9b317ab7 · github.com/ManGregory

I build AI agents into the software development process. At ISD I'm rolling out an agentic SDLC on Claude Code, from spec to pull request review. It rests on 14 years of production engineering, six of them as a team lead.

IMPACT

how my reach grew

ENGINEER 2015–2020

Senior on clinical software

Grew to senior on the LIS genetics module, where results have to be exactly right, and took on its most complex workflows.

TEAM 2020–2023

A team through a stack change

Team lead of 8–13 people. Moved the whole team from C#/.NET desktop to a Java/Angular web product; led my area on emergency support and client go-lives.

PRODUCT 2023–2025

First client go-live

Took our team's part of the Results area live with its first client and fixed its performance bottlenecks, mostly in Oracle. Other LIS teams adopted my Grafana dashboards.

COMPANY 2025–2026

AI for the whole company

Introduced GitHub Copilot in my team, then ran the company-wide intro to AI in development for 300+ people, in English. Since June 2026 building the agentic SDLC full time.

EXPERIENCE

git log --graph

Jun 2026 – now CURRENT

AI Engineer · ISD

- Designing and rolling out an agentic SDLC at ISD on Claude Code, GitHub Spec Kit and GitHub Actions.
- Built its AI code review stage, now running on two large repositories (Java/Angular and Python) and several smaller ones.
- Tested it on 25 known bugs from one repository: the review caught 13 of them (52%) in the changes that introduced them.

May 2022 – Jun 2026

Team Lead / Full Stack Developer · ISD

- Led my team of 8–13 people from the C#/.NET desktop genetics module to the Results area of LIS, a Java/Angular web product for lab results, and coached it through the new stack.
- Took our team's part of the product live with its first client; led my area on emergency support and client go-lives.
- Fixed performance bottlenecks in 2023–2025, mostly in Oracle: execution plans and query optimization.
- Built Grafana dashboards for the Results area that other LIS teams adopted.
- Introduced GitHub Copilot in the team with the product's first custom instructions; in 2026 ran the company-wide intro to AI in development for 300+ people, in English.

Feb – Sep 2020

Course Instructor · Hillel IT School

- Taught C#/.NET courses, from fundamentals to students' first projects.

Oct 2015 – May 2022

.NET Developer → Team Lead · ISD

- Built and maintained the LIS genetics module, a desktop app for genetic test workflows, results processing and reporting, where clinical data has to be exactly right.
- Grew to senior level and became the team's lead in 2020.
- On emergency support on-call from 2017, 2–4 weeks a year, resolving urgent customer issues.

C# · .NET · WinForms · SQL

Jun 2012 – Oct 2015

Software Engineer · PJSC KZRK

- Built and maintained the company's in-house ERP in Delphi: budgeting, tenders, procurement.

Delphi · SQL

PROJECTS

how they work

ISD · INTERNAL

Agentic SDLC

AI agents built into the development process, from spec to merge. Features start as specs in GitHub Spec Kit, Claude Code agents run in GitHub Actions, and a custom AI review process is the quality gate on every pull request.

GitHub Spec Kit · Claude Code · GitHub Actions

ISD · INTERNAL

AI code review

Reviews each pull request from two angles: code quality (best practices, efficiency) and fit to the requirements and documentation in the linked issue tracker. Evaluated retrospectively: run on the changes behind 25 known bugs from one repository, it caught 13.

Claude Code · Multi-agent · Issue trackers

PERSONAL

claude-mentor

A custom Claude command for learning any topic that keeps your progress between sessions.

Claude Code

SKILLS

by area

AI engineering
Agentic SDLC, Claude Code, Claude API, MCP, GitHub Spec Kit, multi-agent workflows, LLM evaluation

Backend
Java, Spring Boot, C#, .NET, REST APIs

Frontend & desktop
Angular, TypeScript, WinForms, Delphi

Data & performance
Oracle (execution plans, query tuning), SQL, T-SQL

Infrastructure
GitHub Actions, Docker, Kubernetes, Helm, Prometheus, Grafana

Leadership
Team leadership, mentoring, technical training and talks, incident response

CERTIFICATIONS

Prometheus and Grafana · robot_dreams — Oct 2025

Oracle SQL Performance Tuning Masterclass · Udemy — Nov 2023

LANGUAGES & EDUCATION

Kryvyi Rih Technical University — Higher education

English — C1 · Advanced

Ukrainian — Native
