● AI ENGINEER @ ISD UKRAINE UTC+2

Hryhorii Manaienkov

AI Engineer · LLM solutions for agentic SDLC

I build LLM-powered solutions for an agentic software development lifecycle: AI agents that work alongside engineers, starting with automated code review. Before that, more than a decade of product engineering, including leading a team's move from desktop to web.

ABOUT

since 2012

I started in 2012 at PJSC KZRK, automating internal business processes in a Delphi ERP. In 2015 I joined ISD to work on a laboratory information system for genetic and clinical labs. I began on the C#/.NET genetics module, became its team lead in 2020, and in 2022 led the whole team's transformation from desktop development to a web-oriented Java and Angular project.

In 2026 I moved to ISD's AI team, where I build LLM-powered solutions for an agentic SDLC. I lead the code-review automation workstream: an AI reviewer built on Claude Code that runs in our GitHub pipeline.

ISD

Full-time

Jun 2026 – now

AI Engineer CURRENT

Building LLM-powered solutions for an agentic SDLC on ISD's AI team: AI agents that take part in the development process alongside engineers. I lead the code-review automation workstream, an AI reviewer built on Claude Code.

`Claude / Anthropic API` `Claude Code` `MCP` `GitHub Actions`

May 2022 – now

Team Lead / Full Stack Developer

Led the transformation of my team from desktop to web: the whole team moved from the C#/.NET genetics module to the Results area of LIS (Laboratory Information System), a full-stack Java and Angular product for managing and reporting lab results. Owned technical direction, code review and delivery; mentored the team through the new stack and coordinated with product and adjacent areas.

`Java` `Spring Boot` `Angular` `TypeScript` `Oracle`

Oct 2015 – May 2022

.NET Developer → Team Lead

Built and maintained the genetics module of the LIS product: a desktop application for genetic test workflows, results processing and reporting. Worked across the C#/.NET stack with a focus on reliability and clinical data correctness. Became the team's lead in 2020.

C# · .NET · WinForms · SQL

Feb – Sep 2020
8 mo

Hillel IT School

Course Instructor · Part-time

Taught C# / .NET programming courses, taking students from fundamentals to their first hands-on projects.

Jun 2012 – Oct 2015
3 yrs 5 mo

PJSC KZRK

Software Engineer

Developed and maintained the company's in-house ERP in Delphi, automating internal business processes: budgeting, tenders, procurement and related workflows.

Delphi · ERP · SQL

SKILLS

by area

AI developer tooling
Agentic SDLC, Claude & Anthropic API, Claude Code, MCP servers, LLM-based code review, GitHub Actions automation

Backend
Java, Spring Boot, C#, .NET, REST services, enterprise transaction patterns

Frontend & desktop
Angular, TypeScript, WinForms, Delphi

Data
Oracle (incl. performance tuning), SQL, T-SQL

Infrastructure
Docker, Kubernetes, Helm, Prometheus, Grafana

Leadership
Team lead since 2020, desktop-to-web transformation, technical direction, code review, mentoring, teaching

CERTIFICATIONS

Prometheus and Grafana · robot_dreams	Oct 2025
Programming with C# · edX	Honor Code
Querying with Transact-SQL · edX	Honor Code
Intro to Computer Science and Programming · edX	Honor Code
Introduction to Linux · edX	Honor Code
