● AI ENGINEER @ ISD

Hryhorii Manaienkov

AI Engineer · ex-Team Lead · Java/Angular, .NET

manaenkov.gregory@gmail.com · hman.pro · linkedin.com/in/hryhorii-manaienkov-9b317ab7 · github.com/ManGregory

I design and roll out an agentic SDLC: AI agents that take part in how a company builds software, from requirements to merge. I got here by bringing AI into my own team first, then into the whole company. Underneath: 14 years of production engineering, six of them as a team lead.

IMPACT

how my reach grew

ENGINEER 2015–2020

Senior engineer on the hard parts

Grew to senior level on the LIS genetics module and took on its most complex parts: genetic test workflows, results processing and clinical data correctness.

TEAM 2020–2023

Team lead on call and at go-lives

Became team lead in 2020, with 8–13 people reporting to me over the years. Led my area on emergency support and on go-live shifts for client launches. In 2022–2023 took the whole team from C#/.NET desktop to a Java and Angular web stack.

PRODUCT 2023–2025

Our part of the product goes live

Grew my team and its part of the product, one team within the Results area, and took it live with the first client. Solved performance problems, many of them in Oracle: execution plans, query optimization. Other LIS teams reused my Grafana dashboards.

COMPANY 2025–2026

AI across the company

Rolled out GitHub Copilot in my team with the product's first custom instructions, then ran a company-wide AI webinar for 300+ people in English. Now rolling out an agentic SDLC whose code review stage cut escaped defects by 40–50%.

EXPERIENCE

git log --graph

Jun 2026 – now CURRENT

AI Engineer · ISD

Designing and rolling out an agentic SDLC across ISD: AI agents that take part in the development process alongside engineers. First stage in production: AI code review that checks each pull request for code quality and for fit to requirements, now used on several repositories with 40–50% fewer escaped defects.

`Claude / Anthropic API` `Claude Code` `MCP` `GitHub Actions`

May 2022 – Jun 2026

Team Lead / Full Stack Developer · ISD

Led the transformation of my team from desktop to web: the whole team moved from the C#/.NET genetics module to the Results area of LIS (Laboratory Information System), a full-stack Java and Angular product for managing and reporting lab results. Led a team of 8–13 people. Owned technical direction, code review and delivery; in 2023–2025 did a lot of performance work, much of it in Oracle (execution plans, query optimization); mentored the team through the new stack and coordinated with product and adjacent areas. From 2025 drove AI adoption: rolled out GitHub Copilot with the product's first custom instructions and ran trainings and knowledge-sharing sessions.

`Java` `Spring Boot` `Angular` `TypeScript` `Oracle`

Feb – Sep 2020

Course Instructor · Hillel IT School

Taught C# / .NET programming courses, taking students from fundamentals to their first hands-on projects.

Oct 2015 – May 2022

.NET Developer → Team Lead · ISD

Built and maintained the genetics module of the LIS product: a desktop application for genetic test workflows, results processing and reporting. Worked across the C#/.NET stack with a focus on reliability and clinical data correctness. Became the team's lead in 2020.

`C#` `.NET` `WinForms` `SQL`

Jun 2012 – Oct 2015

Software Engineer · PJSC KZRK

Developed and maintained the company's in-house ERP in Delphi, automating internal business processes: budgeting, tenders, procurement and related workflows.

Delphi · ERP · SQL

PROJECTS

things I built

ISD · INTERNAL

Agentic SDLC

AI agents built into the development process, from spec to merge. Spec-driven development with GitHub Spec Kit, Claude Code agents running in GitHub Actions, and a custom AI review process as the quality gate.

GitHub Spec Kit · Claude Code · GitHub Actions

ISD · INTERNAL

AI code review

The review stage of the agentic SDLC. Every pull request is checked from several angles: code quality (best practices, efficiency) and fit to functional requirements and documentation pulled from external issue trackers. Runs on two large repositories on different stacks (Java/Angular and Python) and several smaller ones, including its own. Escaped defects down 40–50%.

SKILLS

by area

AI developer tooling
Agentic SDLC design and rollout, multi-agent systems, Claude & Anthropic API, Claude Code, MCP servers, AI code review, GitHub Actions

Backend
Java, Spring Boot, C#, .NET, REST services, enterprise transaction patterns

Frontend & desktop
Angular, TypeScript, WinForms, Delphi

Data & performance
Oracle performance tuning (execution plans, query optimization), SQL, T-SQL

Infrastructure
Docker, Kubernetes, Helm, Prometheus, Grafana

Leadership
Team lead since 2020, desktop-to-web transformation, company-wide AI webinar (300+ people), Copilot adoption, technical direction, code review, mentoring, teaching

CERTIFICATIONS

Prometheus and Grafana · robot_dreams — Oct 2025

Oracle SQL Performance Tuning Masterclass · Udemy — Nov 2023

LANGUAGES & EDUCATION

Kryvyi Rih Technical University — Higher education

Ukrainian — Native

English — C1 · Advanced
